STRATEGIC PRIORITIES

Enterprise Security and Management
Transform enterprise security and management by protecting information against more risks at more points with clear visibility and strong control

Data Center Optimization
Optimize and modernize data center resources and reduce information costs and risks

---

Secure Your Infrastructure

Optimize Infrastructure Operations

Minimize Information Risk and Ensure Compliance

Optimize Storage

Ensure Business Continuity

SOLUTIONS

SYMANTEC ENTERPRISE SOLUTIONS AND RELATED IT PROJECTS

Security Management

Optimize security processes to identify vulnerabilities and protect against attacks.

IT Projects:
Log management
Security information & event management
Security posture visibility

Endpoint Security

Improve threat monitoring and reduce the administrative burden of protecting endpoints against known and unknown threats.

IT Projects:
Endpoint data protection
Endpoint encryption
Endpoint threat management
Mobile security
Network access control
Remote access authentication
Server protection
Strong user authentication

Messaging Security

Protect information against threats in both inbound and outbound email, instant messages (IM), and Microsoft® SharePoint® collaboration with integrated antispam and antivirus protection and advanced content filtering.

IT Projects:
Email encryption
Email & IM protection
Spam blocking

Web Security

Secure and manage Web traffic by filtering Web malware threats, blocking URLs with inappropriate content, and preventing confidential data loss over Web protocols.

IT Projects:
Network data protection
Web fraud detection
Web security & filtering

Endpoint Management

Provide faster and more predictable service and support of clients, servers, and mobile devices to manage assets with greater efficiency and drive down operational costs.

IT Projects:
Application packaging
Client certificate management
Discovery & inventory
Imaging & provisioning
Mobile device management
Remote management
Server monitoring & alerting
Software & patch management

IT Service Management

Actively manage the entire asset lifecycle and align service resources with ITIL to optimize your investments.

IT Projects:
Asset management
IT process automation
License usage & compliance
Service management

Endpoint Virtualization

Provision and protect endpoint environments instantly using streaming, virtualization, and desktop broker technologies to reduce costs and increase productivity.

IT Projects:
Application conflict resolution
Endpoint disaster recovery
On-demand application delivery
On-demand application management
Remote & portable desktop access

IT Compliance

Automate compliance processes using a risk-based approach to protect information, address threats quickly, and reduce costs and risks.

IT Projects:
Data security compliance
IT compliance automation
PCI compliance
Regulatory compliance

Discovery & Retention Management

Capture, classify, and store email, instant messages, SharePoint content, files, and unstructured electronically stored information to enforce retention policies, simplify discovery, and reduce storage costs and management overhead.

IT Projects:
Legal discovery & response
Records retention, discovery, & management

Data Loss Prevention

Identify and protect confidential information to prevent data breaches, demonstrate compliance, and reduce the risk of external attacks and insider threats.

IT Projects:
Confidential data protection
Data breach prevention
Encryption management
File encryption

Storage Management

Standardize and automate the management of heterogeneous storage platforms to maximize storage utilization, increase IT responsiveness, and lower infrastructure and operational costs.

IT Projects:
Storage consolidation
Storage management
Storage optimization
Storage resource & capacity management
Storage virtualization

Archiving

Automate the movement and retention of unstructured information to improve the performance, scale, and manageability of applications while reducing the risk and costs associated with providing transparent user access, efficient e-discovery, and optimized storage.

IT Projects:
Email archiving
Email migration
File system archiving
Medical data archiving
SharePoint archiving
Unstructured data archiving

Data Protection

Prepare for and recover from the effects of equipment failure or accidental loss of data with consistent and reliable data protection that improves the efficiency of systems and staff.

IT Projects:
Backup & recovery
Data deduplication
Data protection for virtualization
Remote office data protection

Disaster Recovery

Meet your business recovery objectives by automating backup and recovery, application clustering, and data replication.

IT Projects:
Backup & Recovery
Business continuity planning
Disaster recovery

High Availability

Protect mission-critical applications and data against planned and unplanned downtime by automating application recovery across physical and virtual environments on major application, server, and storage platforms.

IT Projects:
Eliminating planned downtime
High availability

Virtualization Management

Protect and manage your virtualized infrastructure with tools for backup and recovery, storage management, and high availability and disaster recovery.

IT Projects:
Data protection for virtualization
High availability & disaster recovery for virtualization
Storage management for virtualization

Green IT

Reduce data center energy costs and meet corporate sustainability mandates by improving utilization of existing assets.

IT Projects:
Corporate sustainability
Data center efficiency
Energy reduction
